Safe, gentle and effective  
minimally invasive procedures for  
the face and neck.

# FACE *tite*

The most advanced facial contouring and refinement procedure to reveal a younger looking you.

SURGICAL RESULTS WITH DRAMATICALLY LESS DOWNTIME

*“My skin has not felt this firm since I was a single woman in my twenties. There was little to no discomfort and I was back to my normal activities the next day.”*

- J. S. | PATIENT

One Procedure. Significant, Long-Lasting Results.

## WHAT IS FACETITE?

FaceTite is a new procedure that is comparable to a surgical facelift, without the large scars.

FaceTite provides dramatic improvement in skin laxity on the face and neck, which was previously only attainable through a surgical procedure such as a facelift. FaceTite utilizes minimally invasive radiofrequency energy to melt fat and contour skin.

## WHAT KIND OF POST PROCEDURE CARE IS REQUIRED?

FaceTite is a minimally invasive procedure performed under local anesthesia or light sedation. Post procedure, patients can go home the day of the procedure, and can resume regular activities shortly after.

## WHAT AREAS CAN BE TREATED?

Any areas on the face and neck with saggy skin can be treated. This includes double chins, jowls, nasolabial folds, and other areas with deep lines and loose skin.

## HOW IS THIS BETTER THAN A FACELIFT?

By avoiding a facelift procedure with the large incisions, patients will benefit from reduced post-procedural swelling and discomfort. This is a less traumatic process with a natural looking final result.

## HOW QUICKLY WILL I SEE RESULTS?

Results can be seen immediately, with best results noticeable after 6 weeks, and continuing up to 12 months.

Please speak to your aesthetic provider to see if FaceTite is right for you.
